DETAILED ACTION

Response to Amendment

1. The Amendment filed on 09/21/2010 has been received and made of record. Claims 1, 14, 25 and 36 have been amended and Claims 3, 9, 16, 20, 27 and 31 have been cancelled. Claims 1-2, 4-8, 10-15, 17-19, 21-26, 28-30 and 32-46 are pending in the application.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

As to independent claim 1, the prior art does not teach or fairly suggest a method for generating a wide image video sequence of a scene being recorded using a device having at least two video cameras substantially co-located in a predetermined relationship to each other such that there will be an overlap between images from the respective cameras, said method comprising the steps of calculating a projective transform for pixels of the images from at least one of said cameras based on slopes and positions of said corresponding lines, which said projective transform compensates for the relative rotation between the at least two video cameras, and in combination with other elements.

As to independent claim 14, the prior art does not teach or fairly suggest a device having at least two video cameras substantially co-located and arranged in a predetermined relationship to each other such that there will be an overlap between

Art Unit: 2622

images from the respective cameras, a processor, at least one memory storage area, wherein the processor is configured to calculate a projective transform for pixels of the images from at least one of said cameras based on slopes and positions of said corresponding lines, which said projective transform compensates for the relative rotation between the at least two video cameras; and in combination with other elements.

As to independent claim 25, the prior art does not teach or fairly suggest a computer-readable medium having computer-readable program code portions stored therein, the computer-readable program code portions comprising executable portions that cause a device having at least two video cameras substantially co-located in a predetermined relationship to each other such that there will be an overlap between images from the respective cameras to calculate a projective transform for pixels of the images from at least one of said cameras based on slopes and positions of said corresponding lines, which said projective transform compensates for the relative rotation between the at least two video cameras; and in combination with other elements.

As to independent claim 36, the prior art does not teach or fairly suggest a video recording apparatus having at least two video cameras substantially co-located in a predetermined relationship to each other such that there will be an overlap between images from the respective cameras, the video recording apparatus comprising calculating a projective transform for pixels of the images from at least one of said cameras based on slopes and positions of said corresponding lines, which said

Art Unit: 2622

projective transform compensates for the relative rotation between the at least two video cameras, and in combination with other elements.

As to claims 2, 4-8, 10-13, 15, 17-19, 21-24, 26, 28-30, 32-35, and 37-46, these claims are dependent upon allowable independent claims 1, 14, 25 and 36, respectively and are thus also considered allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
